

**Feel free to use Audacity at home, but remember to follow the “Helpful Hints Worksheet” that I've given you.**

There is one last step that you need to complete in order to Export as an MP3.

As you Export as an MP3, there will be an error message on your computer.  
(It says something about not having the 'lame.dll' file)

**You need to download this plugin for Audacity!!!**

1. Go to this website: <http://lame.buanzo.com.ar/>  
Scroll down until you see this...

2. You need to click on where it says... libmp3lame-win-3.97.zip
3. After downloading this file, you must then “unzip” it. (The file you need to locate is in this folder)

4. Audacity is going to ask you to locate this file as you try to export your project as an MP3. You need to locate this on your computer when it asks you. You only need to do this once and it will work all the time.

5. Your only other option in handing in this project to me on time is to bring a USB drive with your ENTIRE project on it. You will need the actual audacity file and the folder that comes with it.
